DETAILED ACTION

This application has been examined. The original claims 1-4 are pending. The examination results are as following.

Claim Rejections - 35 USC § 103

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claim 1 is rejected under 35 U.S.C. 103(a) as being unpatentable over Kuwajima et al. (US patent 6,339,422) and in view of Tsai et al. (US patent 6,295,053).

Kuwajima et al. disclose that a display control device (1) including an image data writing means (read signal and write signal, see column 4, line 28), a graphics memory (7) connected to the writing means, a data transfer means responsive to a command from the writing means for reading data from the graphic memory, and transferring data to a display means (6). However, Kuwajima et al. do not disclose a write region detection means responsive to addresses accessed by the image data writing. Tsai et al. disclose in figure 5 that a signal detector (300, that is the write region detection means) from the set of VGA signal lines into the ROM unit inside the monitor controller (180) (see column 4, lines 58-65). It would have been obvious to one of ordinary skill in the art at the time the invention was made to utilize the teachings of Tsai et al. including a signal detector as discussed above in the display system of Kuwajima et al. for producing the claimed

Art Unit: 2674

invention because this would detect any era/record commands and data on the VGA signal lines.

Allowable Subject Matter

3. Claims 2-4 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

4. The following is a statement of reasons for the indication of allowable subject matter: None of the cited art teaches or suggests that the display control device as set forth in claim 1, wherein said region detecting means detects, as said write region, the region from the minimum vertical direction address and maximum vertical direction address among the address accessed by said image writing means.
